                                                  "mysiteS20 URL Configuration
   myapp
   The `urlpatterns` list routes URLs to views. For more information please see:
                                                  https://docs.djangoproject.com/en/3.0/topics/http/urls/
                                                Examples:
      👵 apps.py
                                                Function views
       👸 models.py
                                                 1. Add an import: from my_app import views
      🖐 tests.py
                                                   2. Add a URL to urlpatterns: path('', views.home, name='home')
      % views.py
  ▼ 🖿 mysiteS20
                                                 1. Add an import: from other_app.views import Home
      👸 __init__.py
                                                    2. Add a URL to urlpatterns: path('', Home.as_view(), name='home')
       🖧 asgi.py
                                               Including another URLconf
      🖧 settings.py
                                                  1. Import the include() function: from django.urls import include, path
                                                    2. Add a URL to urlpatterns: path('blog/', include('blog.urls')) \,
    templates
                                               import ...
 ▶ venv library
    db.sqlite3
                                                urlpatterns = [
    is manage.py
                                                    path('admin/', admin.site.urls),
